

Assign checklists to users

1.	Purpose of this document	2
2.	Assign users to your checklist	
3.	Assign one or multiple checklists to a user	
4		5
5.	Hide all default checklists for users.	5

1. Purpose of this document

To explain how you can limit / grant users access to checklists.

The administrator can decide which checklists the inspector can use:

- All checklists (no action required)
- Only own custom made checklist
- A single or a set of checklists

2. Assign users to your checklist

Go to the Main Dashboard, select settings and then 'my checklists'. Select your checklist and select in the action button 'assign users'.

ny checklists						Help me
My checklists 🛛		Schedule inspections		Set causes	▼ Set filters	
• Create a brand-new checklist	Easy to Inspect checklists are visible					
Name	Default language of the	e checklist	Version	Publishe	d Visible	Actions
Behaviour Based Safety Checklist	English		2	Ye	s 💿	Action -
/orkplace inspection construction	English		2	Ye	s 💿	 + Copy + Assign user
						🖸 Edit 🖉 Export

Then, assign your inspectors by selecting yes or no.

3. Assign one or multiple checklists to a user

You can now choose:

A) What checklist should be placed for immediate use in the App.

Start typing the name of the checklist. All checklist that could match your search criteria would be displayed.

	Checklist name	Actions					
	Behaviour Based Safety Checklist	the Remove					

You can now choose:

B) Which checklists the user can see (here you can limit the use of other checklists).

Would you like to limit the use of Easy to Inspect to <u>assigned checklists</u>? For disabling the use of other checklists than assigned checklists, select the option "only allow the above selected checklist(s)".

Easy to Inspect check, report analyse

4. App

Based on option A), the inspector sees the checklists assigned prepared in his App. They are immediately available for use.

However, the inspector can always select another custom-made checklist in the library.

Only if you have limited the access to other checklists via option B), the users now can only use the selected checklist. Thereby they are restricted in the use of Easy to Inspect. They can not access the library and download other default or custom-made checklists.

5. Hide all default checklists for users.

Go to the menu and select 'My checklists'

It could become confusing if you have developed specific checklists that differ from but resemble the standard Easy to Inspect checklists. To prevent any confusion, the administrator can hide the Easy to Inspect checklists for the users.

In the menu that will be opened, it is displayed whether the checklists are visible or hidden for the users.

ck on the green bar and the che	cklists will be hidden.

The effect of this action is that users in the App cannot see the Easy to Inspect checklists. The administrator can see all checklists in his dashboard and copy / modify the Easy to Inspect example checklists and rework them to customise for own use.
